The use of face recognition in access control and time attendance has been an inevitable trend which brings the advantageous 'touch-free' experience. With built-in temperature screening to detect elevated body temperatures, this facial recognition access control terminal perfect for adhering to social distancing guidelines with a 0.3m to 2m read range to help reduce risk to staff and visitors.

This Face Recognition Terminal can be deployed in moments - simply plug and play, wherever there is a convenient mains power supply. It's attractive floor-standing pedestal is ergonomically angled and other stand options are available for desktops and turnstiles and tables.

With a capacity to recognise 50,000 faces and record 100,000 individual events, there are numerous integration options, giving extensive compatibility and allowing quick and cost-effective connections between the terminal and existing door-control, attendance monitoring and other security systems.

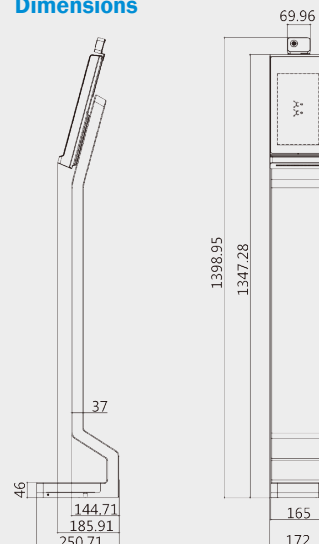

The Temperature Screening function of this terminal **MUST NOT** be considered a diagnostic test or instrument. However, when used to give an indication of a person's body temperature, it can be an effective tool in helping to reduce the potential spread of infection and to evidence that temperature screening checks have been carried out to ensure a reduced risk to staff and visitors.

Due to the wide range of functions built-in to this terminal, it can be re-purposed and reconfigured for other general security/access control uses as required, making this a highly adaptable product.

Features

- Temperature-screening, facial recognition and access control - all in one compact terminal
- Supplied fully assembled
- Be up and running in 5 minutes
- Plug & Play - no installation required for rapid deployment
- Ergonomic floor-standing pedestal included
- Face mask alert option - detects individuals not wearing masks and issues and audio alert reminder
